## Skills

JavaScript

HTML/CSS

React

GatsbyJS

Linux

Agile development

Team planning

Video production

Automated testing

## Education

**Associate's degree, Computer Science**

Southern Maine Community College

2014 - 2017

**Certified Front End Software Engineer**

TripleByte

2019

## Experience

### Software Engineer

Iterative

2020/04 - 2023/02

- Develop and maintain Iterative's flagship website, dvc.org, which includes a fully custom documentation engine (<https://dvc.org/doc>) that uses Git and Markdown to store content. This site uses an extensive set of plugins and custom code to support complex features like automatically highlighting and linking DVC's commands.
- Refactor dvc.org's documentation engine into a reusable package (<https://github.com/iterative/gatsby-theme-iterative>), which became a platform for all of Iterative's Gatsby websites to be built on, including the blog at [iterative.ai](https://iterative.ai).
- Helping team with setting up priorities. Organized and ran the team's agile workflow - planning, prioritization, retros. Using tools like GitHub Kanban boards, Slack.
- Make improvements to all websites with a focus on both developer and editor experience, utilizing CI extensively to ensure that a preview of proposed changes is deployed, all code is styled consistently, and tasks like checking for broken links are automated (<https://github.com/iterative/link-check>). Implemented a CMS to help non-technical editors contribute.

## Projects

### Gatsby Recipe Book

<https://github.com/rogermparent/gatsby-recipe-book>

An experimental cooking recipe website utilizing a local-focused stack that utilizes GatsbyJS in a unique way.
